ISHIK PLASTIC ARAZ

ABOUT US

Ishik Plastik Araz industrial group

This organization, by employing modern knowledge alongside proper management approaches, and through the synergy of wisdom, experience and unified systematic thinking, aspires elevated horizons.

By producing products in accordance with world-class standards and using raw materials of the highest quality and at a much lower cost, it is ready to export its products to the CIS countries of the region and also to the European Union countries.

Developing the domestic market share and reaching more export markets will be the plans and goals of this group for the future.

MISSION

Mission Statement

Expansion of research and development (R&D) activities

Efforts to expand training activities for improving human resources performance, with a systemic approach and perspective

Improving quality and achieving customer satisfaction

Expanding market share in domestic and regional markets

محصولات PRODUCTS

Stretch film

Ishik Plastic Azar Company, by using advanced machinery, is one of the largest producers in the field of films.

For industrial and food stretch. These films are used for the protection, safety, and better packaging of food products, goods,

and other products manufactured in various factories, and are offered to the market.

Stretch film is a very suitable option for the safety and protection of goods and overall packaging transportation,

so that products remain safe from harm and damage. Stretch can be a suitable substitute for nylon, cartons, etc., and it can be used for manual, semi-automatic, and automatic packaging.

This product is available in transparent form and in various colors, according to customer orders and the requested weight.

It is produced.

Pallet stretch is used for storing products in warehouses or during transportation

to protect products against dust, moisture, possible vibrations, and also provides safety against potential risks.

Colored stretch films can also be used. The stretch film of this company

is produced in various colors with high tensile strength, excellent puncture resistance, and strong sealing, making it suitable for use during transportation.

Industrial stretch is produced in thicknesses from 1 to 75 microns and in various widths, with the highest strength and stretchability.

It should be noted that this product, based on customer needs, with the latest machines...

Silage stretch film

Forage stretch film can be used to protect all types of hay, corn, forage and other agricultural products. Among the notable features of this product are appropriate stretch, good adhesion between layers, protection of the product against weathering and moisture in open and closed spaces, prevention of product wastage during transportation, increasing the speed of packaging and harvesting

Hand wrap stretch film

This product is produced and used for packaging pallets and various products by hand (operator). An economical product for packaging various products and can be used in industrial units and manufacturers of products such as wire and cable, hoses, faucets, office supplies, etc. The features of this product include complete protection of products against dust, impact and moisture, which can be provided in various widths and thicknesses in transparent and colored forms.

Machine wrap stretch film

Another product that has more applications in industries. The machine method is packaging with stretch film. In the machine method, as the name suggests, the rolls of stretch film are placed on the machine and then the machine automatically and at high speed performs the packaging work. This product has the following features: high adhesion, good stretch, preventing the transfer of shock and moisture to the product, and protecting the pallet. This product can also be produced in color to distinguish the product.

Super power stretch film

Due to its very high resistance to tearing and damage and its excellent stretch, this product is suitable for packaging in high-speed lines. Super Power Stretch Film can be used for the safety and protection of pallets and various forms of packaging such as beverages, mineral water, pipe profiles, and fittings, tissue paper, cardboard, etc.

Furniture stretch film

This product is produced in various widths and thicknesses and has high stretchability. The features of this product include high quality, affordable price, high durability and longevity, flexibility and resistance to tearing, preventing damage and scratching of the product, and increasing the speed and weight of packaging.
